Tabela 2: Fatorial

Tipo	%
char	c
int	d
float	e, E, f, g, G
int (octal)	o
int (hexa)	x, X
uint	u
char*	s

Tabela 3: scanf() - %[*][width][modifiers]type

modifiers	tipo
h	short int (d, i, n), or unsigned short int (o, u, x)
l	long int (d, i, n), or unsigned long int (o, u, x), or double (e, f, g)
L	long double (e, f, g)

Tabela 4: scanf() %[*][width][modifiers]type

função	descrição
atof	Convert string to double
atoi	Convert string to integer
atol	Convert string to long integer
strtod	Convert string to double
strtol	Convert string to long integer
strtoul	Convert string to unsigned long integer

Tabela 5: stdlib

função	descrição
cos	Compute cosine
sin	Compute sine
tan	Compute tangent
acos	Compute arc cosine
asin	Compute arc sine
atan	Compute arc tangent
atan2	Compute arc tangent with two parameters
cosh	Compute hyperbolic cosine
sinh	Compute hyperbolic sine
tanh	Compute hyperbolic tangent
exp	Compute exponential function
frexp	Get significand and exponent
ldexp	Generate number from significand and exponent
log	Compute natural logarithm
log10	Compute common logarithm
modf	Break into fractional and integral parts
pow	Raise to power
sqrt	Compute square root
ceil	Round up value
fabs	Compute absolute value
floor	Round down value
fmod	Compute remainder of division

Tabela 6: math (angulos em radianos)

```

17 using namespace std;
18
19
20 #define abs(a) ((a) > 0 ? (a) : -(a))
21
22 int main()
23 {

2.2 Teoria dos números

```

1 int gcd(int x, int y)
2 {
3     return y ? gcd(y, x % y) : abs(x);
4 }
5 uint64_t lcm(int x, int y)
6 {
7     if (x && y) return abs(x) / gcd(x, y) * uint64_t(abs(y));
8     else return uint64_t(abs(x) | y);
9 }

```

Código 15: máximo divisor comum e mínimo múltiplo comum

```

1 bool isPrime(int n)
2 {
3     if (n < 0) return isPrime(-n);
4     if (n == 1) return true;
5     if (n < 5 || n % 2 == 0 || n % 3 == 0) return (n == 2 || n == 3);
6
7     int maxP = sqrt(n) + 2;
8     for (int p = 5; p < maxP; p += 6)
9     {
10         if (n % p == 0 || n % (p+2) == 0) return false;
11     }
12     return true;
13 }

```

Código 16: decide se um número é primo

```

1 typedef map<int, int> prime_map;
2 void squeeze(prime_map& M, int& n, int p)
3 {
4     for (; n % p == 0; n /= p) M[p]++;
5 }
6 void factor(int n, prime_map& M)
7 {
8     if (n < 0) return n = -n;
9     if (n < 2) return;
10
11     squeeze(M, n, 2);
12     squeeze(M, n, 3);
13
14     int maxP = sqrt(n) + 2;
15     for (int p = 5; p < maxP; p += 6)
16     {
17         squeeze(M, n, p);
18         squeeze(M, n, p+2);
19     }
20     if (n > 1) M[n]++;
21 }

```

Código 17: Retorna a fatoração em números primos de abs(n).

2.3 Grafos

```
