1 Tabelas

2 Codigos

2.1	Exemplos	2
2.2	Teoria dos números	5
2.3	Grafos	6
2.4	Geometria	8
2.5	Outros	9

Lista de Tabelas

1	Limites de representação de dados	1
2	Fatorial	1
3	scanf() - %[*][width][modifiers]type	1
4	scanf() %[*][width][modifiers]type	2
5	stdlib	2
6	math (angulos em radianos)	2

Lista de Listagens

1	Modelo	2
2	comparcao de ponto flutuante	2
3	.vimrc para a configuração do vim	2
4	printf	2
5	exemplo de map	3
6	exemplo de set e multiset	3
7	exemplo de list	3
8	exemplo de queue	3
9	exemplo de priority queue	4
10	exemplo de stack	4
11	exemplo de vector	4
12	exemplo de string	4
13	exemplo de ordenação	5
14	pesquisa binária	5
15	Arredondamento e output em outras bases	5
16	máximo divisor comum e mínimo multiplo comum	5
17	decide se um número é primo	6
18	Retorna a fatoração em números primos de abs(n).	6
19	Verifica se o grafo é aciclico.	6
20	Caminho minimo 1 para todos pesos positivos.	6
21	Floresta dijunta de arvores	6
22	Arvore geradora mínima kruskal	7
23	verifica se um grafo é bipartido	7
24	faz a ordenação topológica de um grafo acíclico	7
25	calcula fluxo máximo	8
26	ponto e poligono	8
27	Decide se q está sobre o segmento fechado pr.	8
28	Decide se os segmentos fechados pq e rs têm pontos em comum.	8
29	Calcula a distância do ponto r ao segmento pq.	9
30	Classifica o ponto p em relação ao polígono T. Retorna 0, -1 ou 1 dependendo se p está no exterior, na fronteira ou no interior de T, respectivamente.	9
31	josephus problem	9

1 Tabelas

tipo	bits	min...max	precisao
char	8	0..127	2
signed char	8	-128..127	2

Tabela 2: Fatorial

Tipo	%
char	c
int	d
float	e, E, f, g, G
int (octal)	o
int (hexa)	x, X
uint	u
char*	s

Tabela 3: scanf() - %[*][width][modifiers]type

2 Codigos

2.1 Exemplos

modifiers	tipo
h	short int (d, i, n), or unsigned short int (o, u, X)
l	long int (d, i, n), or unsigned long int (o, u, x)
L	long double (e, f, g)

Tabela 4: scanf() %[*][width][modifiers]type

função	descrição
atof	Convert string to double
atoi	Convert string to integer
atol	Convert string to long integer
strtod	Convert string to double
strtol	Convert string to long integer
strtoul	Convert string to unsigned long integer

Tabela 5: stdlib

função	descrição
cos	Compute cosine
sin	Compute sine
tan	Compute tangent
acos	Compute arc cosine
asin	Compute arc sine
atan	Compute arc tangent
atan2	Compute arc tangent with two parameters
cosh	Compute hyperbolic cosine
sinh	Compute hyperbolic sine
tanh	Compute hyperbolic tangent
exp	Compute exponential function
frexp	Get significand and exponent
ldexp	Generate number from significand and exponent
log	Compute natural logarithm
log10	Compute common logarithm
modf	Break into fractional and integral parts
pow	Raise to power
sqrt	Compute square root
ceil	Round up value
fabs	Compute absolute value
floor	Round down value
fmod	Compute remainder of division

Tabela 6: math (angulos em radianos)

```
1 #include <stdio.h>
2 #include <stdlib.h>
3 #include <string.h>
4 #include <math.h>
5
6 #include <inttypes.h>
7 #include <ctype.h>
8
9 #include <algorithm>
10 #include <utility>
11 #include <iostream>
12
13 #include <map>
14 #include <set>
15 #include <vector>
16 #include <sstream>
17
18 using namespace std;
19
20 #define abs(a) ((a) > 0 ? (a) : -(a))
21
22 int main()
23 {
24     int n;
25

1 /**
2  * The Josephus problem (or Josephus permutation) is a
3  * theoretical problem related to a certain
4  * counting-out game. There are people standing in
5  * a circle waiting to be executed. After the first
6  * man is executed, certain number of people are
7  * skipped and one man is executed. Then again,
8  * people are skipped and a man is executed. The
9  * elimination proceeds around the circle (which is
10 * becoming smaller and smaller as the executed
11 * people are removed), until only the last man
12 * remains, who is given freedom. The task is to
13 * choose the place in the initial circle so that
14 * you are the last one remaining and so survive.
