## Lista de Tabelas

1	Limites de representação de dados . . . . .	2
2	Fatorial . . . . .	2
3	scanf() - %[*][width][modifiers]type . . . . .	2
4	scanf() %[*][width][modifiers]type . . . . .	2
5	stdlib . . . . .	2
6	math (angulos em radianos) . . . . .	3

18	decide se um número é primo . . . . .	8
19	Retorna a fatoração em números primos de abs(n). . . . .	8
20	Calcula Valor de $a^b \bmod n$ de forma rápida. . . . .	8
21	Verifica se o grafo é aciclico. . . . .	8
22	Caminho minimo 1 para todos pesos positivos. . . . .	9
23	Floresta dijunta de arvores . . . . .	9
24	Arvore geradora mínima kruskal . . . . .	10
25	verifica se um grafo é bipartido . . . . .	10
26	faz a ordenação topológica de um grafo acíclico . . . . .	11
27	calcula fluxo máximo, Ford-Fulkerson . . . . .	11
28	calcula fluxo máximo, algoritmo mais eficiente porém muito maior em tempo de codificação . . . . .	12
29	ponto e poligono . . . . .	13
30	Decide se q está sobre o segmento fechado pr. . . . .	14
31	Decide se os segmentos fechados pq e rs têm pontos em comum. . . . .	14
32	Calcula a distância do ponto r ao segmento pq. . . . .	14
33	Classifica o ponto p em relação ao polígono T. Retorna 0, -1 ou 1 dependendo se p está no exterior, na fronteira ou no interior de T, respectivamente. . . . .	14
34	String matching - Algoritmo KMP - $O(n + m)$ . . . . .	15
35	josephus problem . . . . .	15
36	Gera as permutações dos elementos da string . . . . .	15
37	Ignora os dois floats do meio. Retornará 2 no sucesso. . . . .	16
38	Referencias map . . . . .	16

## Algoritmos

1	Modelo . . . . .	3
2	comparcao de ponto flutuante . . . . .	3
3	.vimrc para a configuração do vim . . . . .	4
4	função que acelara o cin. Não deve ser usada com printf . . . . .	4
5	printf . . . . .	4
6	exemplo de map . . . . .	4
7	exemplo de set e multiset . . . . .	4
8	exemplo de list . . . . .	5
9	exemplo de queue . . . . .	5
10	exemplo de priority queue . . . . .	5
11	exemplo de stack . . . . .	6
12	exemplo de vector . . . . .	6
13	exemplo de string . . . . .	6
14	exemplo de ordenação . . . . .	7
15	pesquisa binária . . . . .	7
16	Arredondamento e output em outras bases . . . . .	7
17	máximo divisor comum e mínimo multiplo comum . . . . .	8

# 1 Tabelas

20! = 2.432.902.008.176.640.000 [limite do (u)int64.t]

Tabela 2: Fatorial

Tipo	%
char	c
int	d
float	e, E, f, g, G
int (octal)	o
int (hexa)	x, X
uint	u
char*	s

Tabela 3: scanf() - %[\*][width][modifiers]type

modifiers	tipo
h	short int (d, i, n), or unsigned short int (o, u, x)
l	long int (d, i, n), or unsigned long int (o, u, x), or double (e, f, g)
L	long double (e, f, g)

Tabela 4: scanf() %[\*][width][modifiers]type

função	descrição
atof	Convert string to double
atoi	Convert string to integer
atol	Convert string to long integer
strtod	Convert string to double
strtol	Convert string to long integer
strtoul	Convert string to unsigned long integer

Tabela 5: stdlib

função	descrição
cos	Compute cosine
sin	Compute sine
tan	Compute tangent
acos	Compute arc cosine
asin	Compute arc sine
atan	Compute arc tangent
atan2	Compute arc tangent with two parameters
cosh	Compute hyperbolic cosine
sinh	Compute hyperbolic sine
tanh	Compute hyperbolic tangent
exp	Compute exponential function
frexp	Get significand and exponent
ldexp	Generate number from significand and exponent
log	Compute natural logarithm
log10	Compute common logarithm
modf	Break into fractional and integral parts
pow	Raise to power
sqrt	Compute square root
ceil	Round up value
fabs	Compute absolute value
floor	Round down value
fmod	Compute remainder of division

Tabela 6: math (angulos em radianos)

## 2 Codigos

### 2.1 Exemplos

Código 1: Modelo

```

1 #include <stdio.h>
2 #include <stdlib.h>
3 #include <string.h>
4 #include <math.h>
5
6 #include <inttypes.h>
7 #include <ctype.h>
8 #include <limits.h>
9
10 #include <algorithm>
11 #include <utility>
12 #include <iostream>
13
14 #include <map>
15 #include <set>
16 #include <vector>
17 #include <list>
18 #include <queue>
19 #include <sstream>
20
21 using namespace std;
22
23 #define abs(a) ((a) > 0 ? (a) : -(a))
24
25 int main()
26 {
27     int n;
28
29     cin >> n;
30
31     for (int i = 0; i < n; i++)
32     {
33
34     }
35
36     while (cin >> n)
37     {
38
39     }
40     return 0;
41 }

```

Código 2: comparcao de ponto flutuante

```

1 const double EPS = 1e-10;
2 /**
3  * -1 se x < y
4  * 0 se x = y
5  * 1 se x > y

```

```

6  */
7  inline int cmp (double x, double y = 0, double tol = EPS)
8  {
9      return (x <= y + tol) ? (x + tol < y) ? -1 : 0 : 1;
10 }

```

Código 3: .vimrc para a configuração do vim

```

1 set ai noet ts=4 sw=4 bs=2
2 syn on
3 mat Keyword "\<foreach\>"

```

Código 4: função que acelara o cin. Não deve ser usada com printf

```

1 std::cout.sync_with_stdio(false);

```

Código 5: printf

```

1 /* printf example */
2 #include <stdio.h>
3
4 int main()
5 {
6     printf ("Characters: %c %c \n", 'a', 65);
7     printf ("Decimals: %d %ld\n", 1977, 650000L);
8     printf ("Preceding with blanks: %10d \n", 1977);
9     printf ("Preceding with zeros: %010d \n", 1977);
10    printf ("Some different radixes: %d %x %o %#x %#o \n", 100, 100, 100,
100, 100);
11    printf ("floats: %4.2f %+0e %E %4.2f\n", 3.1416, 3.1416, 3.1416,
3.1);
12    printf ("Width trick: %*d \n", 5, 10);
13    printf ("%s \n", "A string");
14    return 0;
15 }
16 /* %[flags (-, +, etc)][width][.precision][length (h,l,L)]specifier
17 Characters: a A
18 Decimals: 1977 650000
19 Preceding with blanks:      1977
20 Preceding with zeros: 0000001977
21 Some different radixes: 100 64 144 0x64 0144
22 floats: 3.14 +3e+000 3.141600E+000 3.10
23 Width trick:      10
24 A string
25 */

```

Código 6: exemplo de map

```

1 #include <iostream>
2 #include <map>
3 using namespace std;
4
5 int main ()

```

```

6 {
7     map<char,int> mymap;
8     map<char,int>::iterator it;
9     pair<map<char,int>::iterator,bool> ret;
10
11     // first insert function version (single parameter):
12     mymap.insert ( pair<char,int>('a',100) );
13     mymap.insert ( pair<char,int>('z',200) );
14
15     ret=mymap.insert (pair<char,int>('z',500) );
16     if (ret.second==false)
17     {
18         cout << "element 'z' already existed";
19         cout << " with a value of " << ret.first->second << endl;
20     }
21
22     // third insert function version (range insertion):
23     map<char,int> anothermap;
24     anothermap.insert(mymap.begin(),mymap.find('c'));
25
26     // showing contents:
27     cout << "mymap contains:\n";
28     for ( it=mymap.begin(); it != mymap.end(); it++ )
29         cout << (*it).first << " => " << (*it).second << endl;
30
31     map<char,string> mymap;
32     mymap['a']="an element";
33     if (mymap.count('a') > 0)
34         cout << mymap['a'] << " is an element of mymap.\n";
35
36     while (!mymap.empty())
37     {
38         cout << mymap.begin()->first << " => ";
39         cout << mymap.begin()->second << endl;
40         map<char, int>::iterator erasedelement = mymap.erase(mymap.begin());
41         ;
42     }
43     return 0;
44 }

```

Código 7: exemplo de set e multiset

```

1 #include <iostream>
2 #include <set>
3 using namespace std;
4
5 int main ()
6 {
7     multiset<int> mymultiset;
8     multiset<int>::iterator it;
9
10    // set some initial values:
11    for (int i=1; i<=5; i++) mymultiset.insert(i*10);    // 10 20 30 40 50
12
13    cout << "size: " << (int) mymultiset.size() << endl;

```

```

14  cout << "count: " << (int) mymultiset.count(10) << endl;
15
16  it=mymultiset.find(20);
17  mymultiset.erase (it);
18
19  if (! mymultiset.empty)
20      mymultiset.erase (mymultiset.find(40));
21
22  for (it=mymultiset.begin(); it!=mymultiset.end(); it++)
23      cout << " " << *it;
24
25  int myints[]={19,72,4,36,20,20};
26  multiset<int> first (myints,myints+3);    // 4,19,72
27  multiset<int> second (myints+3,myints+6); // 20,20,36
28
29  first.swap(second); // troca conteudo. o primeiro fica [20,20,36] e o
30                        segundo [4,19,72]
31  return 0;
32 }

```

Código 8: exemplo de list

```

1  #include <iostream>
2  #include <list>
3  using namespace std;
4
5  int main ()
6  {
7      list<int> mylist (2,100);           // two ints with a value of 100
8      mylist.push_front (200);
9      mylist.push_back (300);
10
11     it = mylist.begin();
12     mylist.insert (it,10);
13     mylist.insert (it,2,20); // two ints with a value of 20
14
15     mylist.reverse(); // Reverses the order of the elements in the list.
16
17     cout << "mylist contains:";
18     for (list<int>::iterator it=mylist.begin(); it!=mylist.end(); ++it)
19         cout << " " << *it;
20
21     cout << "Popping out the elements in mylist:";
22     while (!mylist.empty())
23     {
24         cout << " " << mylist.front();
25         mylist.pop_front();
26     }
27
28     while (!mylist.empty())
29     {
30         cout << " " << mylist.back();
31         mylist.pop_back();
32     }
33

```

```

34  cout << mylist.size() << endl;
35
36  return 0;
37 }

```

Código 9: exemplo de queue

```

1  #include <iostream>
2  #include <queue>
3  using namespace std;
4
5  int main ()
6  {
7      queue<int> myqueue;
8      int sum (0);
9
10     for (int i=1;i<=10;i++) myqueue.push(i);
11
12     myqueue.back() -= myqueue.front();
13
14     cout << "size: " << (int) myqueue.size() << endl;
15
16     while (!myqueue.empty())
17     {
18         sum += myqueue.front();
19         myqueue.pop();
20     }
21
22     cout << "total: " << sum << endl;
23
24     return 0;
25 }

```

Código 10: exemplo de priority queue

```

1  #include <iostream>
2  #include <queue>
3  using namespace std;
4
5  int main ()
6  {
7      priority_queue<int> mypq;
8
9      mypq.push(30);
10     mypq.push(100);
11     mypq.push(25);
12     mypq.push(40);
13
14     cout << "size: " << (int) mypq.size() << endl;
15
16     cout << "Popping out elements...";
17     while (!mypq.empty())
18     {
19         cout << " " << mypq.top();
20         mypq.pop();

```

```

21 }
22 cout << endl;
23
24 return 0;
25 }

```

---

Código 11: exemplo de stack

---

```

1 #include <iostream>
2 #include <stack>
3 using namespace std;
4
5 int main ()
6 {
7     stack<int> mystack;
8     int sum = 0;
9
10    mystack.push(10);
11    mystack.push(20);
12
13    mystack.top() -= 5;
14
15    while (!mystack.empty())
16    {
17        sum += mystack.top();
18        mystack.pop();
19    }
20
21    cout << "size: " << (int) mystack.size() << endl;
22
23    return 0;
24 }

```

---

Código 12: exemplo de vector

---

```

1 #include <iostream>
2 #include <vector>
3 using namespace std;
4
5 int main ()
6 {
7     vector<int> myvector (3,100);
8     vector<int>::iterator it;
9
10    myvector.reserve(100);
11
12    for (i=0; i<myvector.size(); i++)

```

## 2.6 Outros

### Código 35: josephus problem

```

1 /**
2 The Josephus problem (or Josephus permutation) is a theoretical problem
   related to a certain counting-out game. There are people standing in

```

a circle waiting to be executed. After the first man is executed, certain number of people are skipped and one man is executed. Then again, people are skipped and a man is executed. The elimination proceeds around the circle (which is becoming smaller and smaller as the executed people are removed), until only the last man remains, who is given freedom. The task is to choose the place in the initial circle so that you are the last one remaining and so survive.

```

3 */
4
5 using namespace std;
6
7 int josephus(int n, int m)
8 {
9     int res = 0;
10    vector<int> people;
